

FEATURES & BENEFITS

THREE TECHNOLOGIES, ONE SHAPE

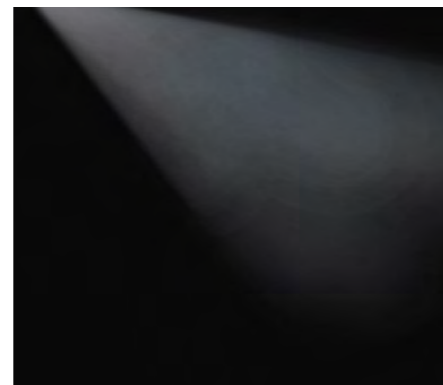

The name TriTec refers to the three technologies: Downlight, spotlights and Lens wallwasher. These three technologies can be used to create customised lighting concepts while keeping the overall look of the ceiling consistent.

Downlight

Spotlight

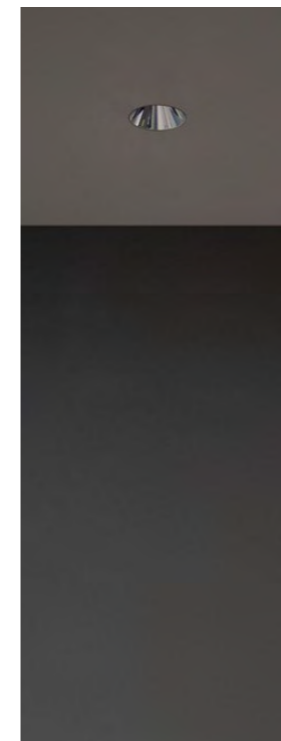

Lens wallwasher

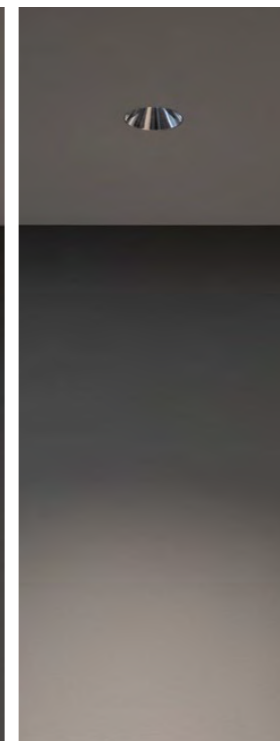

GLARE-FREE LIGHT WITHOUT THE DISRUPTIVE GLOW OF THE LUMINAIRE BODY

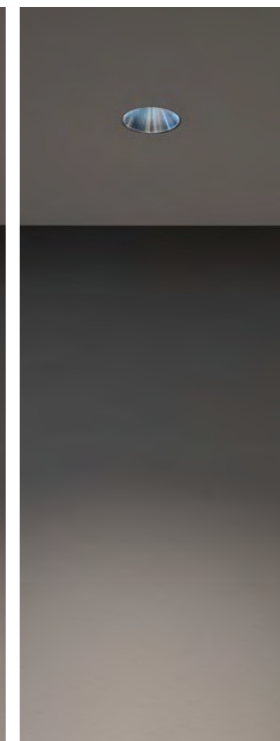

In TriTec luminaires, the actual light source is set back in the ceiling by an anti-dazzle cone, which significantly increases the dimming area. A special layer ensures that the anti-dazzle cone does not scatter light itself and that the light only shines on the required surfaces in the room. This creates 100% darklight effect. The cone does not affect the light emitted, so customer-specific colour variations can also be achieved without affecting the colour temperature.

Lights off

Lights on with darklight effect
